## Biography

Matthew obtained his Electrical Engineering degree from Clarkson University. He began his career designing, programming, installing, and commissioning emissions controls and performance upgrades for natural gas compression engines and facilities; projects that often involved reviving equipment manufactured in the 1920s and last used in the 1980s. Moving on to larger projects, he began designing electrical systems for land-rigs and jack-up-rigs (oil rigs). Services Matthew offers include analysis of residential, commercial, and industrial equipment and systems, repair cost analysis, root cause failure analysis, product design and defect analysis, origin and cause investigations for fires and explosions.
